## Paul Linton

*Visual Space Perception* William H. Ittelson, 1960

The Geometries of Visual Space Mark Wagner, 2012-11-12 When most people think of space, they think of physical space. However, visual space concerns space as consciously experienced, and it is studied through subjective measures, such as asking people to use numbers to estimate perceived distances, areas, angles, or volumes. This book explores the mismatch between perception and physical reality, and describes the many factors that influence the perception of space including the meaning assigned to geometric concepts like distance, the judgment methods used to report the experience, the presence or absence of cues to depth, and the orientation of a stimulus with respect to point of view. The main theme of the text is that no single geometry describes visual space, but that the geometry of visual space depends upon the stimulus conditions and mental shifts in the subjective meaning of size and distance. In addition, *The Geometries of Visual Space*: \*contains philosophical, mathematical, and psychophysical background material; \*looks at synthetic approaches to space perception including work on hyperbolic, spherical, and Euclidean geometries; \*presents a meta-analysis of studies that ask observers to directly estimate size, distance, area, angle, and volume; \*looks at the size constancy literature in which observers are asked to adjust a comparison stimulus to match a variety of standards at different distances away; \*discusses research that takes a multi-dimensional approach toward studying visual space; and \*discusses how spatial experience is influenced by memory. While this book is primarily intended for scholars in perception, mathematical psychology, and psychophysics, it will also be accessible to a wider audience since it is written at a readable level. It will make a good graduate-level textbook on space perception.

**Visual Space Perception** Maurice Hershenson, 1999 A renewed interest in the study of vision has attracted scholars from such diverse fields as neuroscience, computer science, mathematics, physics and philosophy. At the same time, the development of imaging devices and popularization of stereoscopic effects has increased student interest in vision. This primer provides an overview of the principles of space perception in a handbook format that should appeal to researchers as well as students. Topics covered include geometrical and distal-proximal relationships, spatial localization, stereopsis, cyclopean perception, stimulus inadequacy, pictorial cues, perceived size and shape, Gibsonian psychophysics, lateral motion, motion in depth, perceived object motion, and motion detection.

The Geometries of Visual Space Mark Wagner, 2006 First Published in 2006. Routledge is an imprint of Taylor & Francis, an informa company.

*The Perceptual Organization of Visual Space-time* Sergei Gepshtein, 2001

**The Perception and Cognition of Visual Space** Paul Linton, 2017-08-28 This book explores a central question in the study of depth perception - 'does the visual system rely upon objective knowledge and subjective meaning to specify visual depth?' Linton advances an alternative interpretation to the generally accepted affirmative answer, according to which many of the apparent contributions of knowledge and meaning to depth perception are better understood as contributions to our post-perceptual cognition of depth. In order to defend this position a new account of visual cognition is required, as well as a better understanding of the optical and physiological cues to depth. This book will appeal to students and researchers in psychology, vision science, and philosophy, as well as technologists and content creators working in virtual and augmented reality.

*Visual Space Perception and Action* Jochen Müsseler, A. H. C. van der Heijden, Dirk Kerzel, 2004 This special issue examines the basic processes of space perception and how these processes interact with action planning and motor control.

The Global Structure of Visual Space Tarow Indow, 2004 The space we see around us is the end product of a long series of processes: physical, physiological, and cognitive. It is a highly structured perceptual entity. In contrast to the fact that most studies of visual perception are concerned with local phenomena in this visual space, the main purpose of this book is to discuss the global structure of visual space. The physical space which surrounds us is of Euclidean structure, but its perceived image is not necessarily structured in that way. Problems such as why the sky appears as a vault and why the horizon is located at eye level are discussed in the book.

**Space A Visual Encyclopedia** DK, 2020-08-18 From the Moon, Sun, and planets of our Solar System to space exploration, black holes, and dark matter, this completely revised and updated children's encyclopedia covers all you need to know about the cosmos. The most up-to-date images from space agencies such as NASA and ESA combine with info panels, timelines, interviews, diagrams, and activities you can do at home to help you understand the majesty and wonder of space. Learn about the Space Race, the Apollo Moon Landings, the Voyager craft that first probed the outer planets, the Hubble telescope, and the International Space Station (ISS) - the state-of-the-art laboratory orbiting Earth. Find out about future missions, space tourism, and the latest discoveries in the furthest reaches of our galaxy. Discover how to find constellations and where to look for stars and planets, including Venus and Mars, in the night sky. Learn how galaxies such as our Milky Way were formed. Part of a series of best-selling encyclopedias for children, Space: A Children's Encyclopedia is a rocket ride from the beginning of time to the near future, and from planet Earth out to the furthest reaches of the Universe.

**Psychophysical Analysis of Visual Space** John C. Baird, 2013-10-22 Psychophysical Analysis of Visual Space focuses on

the use of psychophysics in the analysis of visual space, with emphasis on space perception and physiological optics. Topics covered include null-size judgment, ratio-size judgment, frontal-size judgment, and distance judgment, as well as selected physiological correlates of size and distance judgments. A theoretical analysis of model reduction is also presented. This volume consists of 11 chapters and opens with an overview of basic definitions and evidence in support of the constancy hypothesis. A psychophysical approach to the problems of visual space is described. The reader is then introduced to null-size judgment, ratio-size judgment, frontal-size judgment, and distance judgment, with emphasis on the importance of the retina as a reference for spatial judgments and how size judgments of targets at different distances can be related to judgments of targets at a constant distance. Some of the important relationships between ocular physiology and size-distance judgments are also examined, paying particular attention to size and distance judgments which relate to the variables of convergence, accommodation, angle-of-regard, and binocular disparity. The remaining chapters look at two stimulus correlates of distance judgments: frontal size and longitudinal size. This book will be of interest to physiologists, physicists, and experimental psychologists.

**Some Theories of Visual Space** August William Weber, 1902

Visual Space Perception Maurice Hershenson, 1998

**Visual space perception** William H. Ittelson, 1969

The Detection of Nonplanar Surfaces in Visual Space W. R. Uttal, 2014-01-14 First published in 1984. This monograph is the third in a series that examines the nature of a midlevel visual process relatively uncontaminated by either peripheral receptor or central cognitive processing. The paradigm utilized in this study selectively assays what seems to be a relatively fixed algorithmic mechanism involved in the extraction of dotted stimulus-forms from masks consisting of random dots.

**Interior Space: a Visual Exploration of the International Space Station** Paolo Nespoli, Roland Miller, 2020 Unseen images of the International Space Station, untenanted and eerie: the legacy of humanity's fragile foothold in space On November 2 2020, NASA celebrates the 20th anniversary of continuous human habitation in space of the International Space Station. In Interior Space, American photographer Roland Miller and Italian astronaut and photographer Paolo Nespoli offer an in-depth portrait of the ISS, creating amazing unpeopled images of the interior of the ISS for the first time. As internationally acclaimed scholars of space archaeology Alice Gorman and Justin St. P. Walsh write in their essays, the ISS speaks not only of who we are and will be, but also of who we were. In 2024 the ISS will be abandoned; in 2028 it will be destroyed. This book provides us with an eerie account of what will remain in the space after our passing. Italian-born astronaut Paolo Nespoli (born 1957) spent 313 days in space. After a career in the military, he earned a M.Sc. in Aerospace Engineering, then joined the European Space Agency spending time in Europe, the US and Russia. In 2007 he flew on the Space Shuttle and then, in 2010 to 2011 and 2017, he flew again to the International Space Station with the Russian Soyuz.

He retired in 2018 from the astronaut corps launching a career as an international public speaker. Chicago-born photographer Roland Miller (born 1958) taught photography at Brevard Community College in Cocoa, Florida, for 14 years, where he visited many nearby NASA launch sites. He is the author of the acclaimed book *Abandoned in Place: Preserving America's Space History*, documenting deactivated and repurposed space launch and test facilities around the US. In 2017 he started the project *Interior Space*. His work is held at the Museum of Contemporary Photography, Chicago and at the NASA Art Collection in Washington, DC.

**The Space Between Our Ears** Michael Morgan, 2003 In this title, Michael Morgan explains how our brain interprets the images that the outside world forms in our eyes. Using sources from over the centuries - philosophical writings, scientific thinking, experiments, passages from poems, novels and films - Morgan reveals the problems that the brain has to confront in manufacturing our perceptions. The book includes optical drawings as well as some simple experiments that the reader can do to test the different components of one's sight and our own reactions to it. There is a long way to go in neurological terms before we can understand how our brains actually see, or indeed the precise location of where this happens inside the grey matter. Morgan recognizes that to achieve such an understanding may even necessitate the development of a new language that can better encompass the difficult scientific and logical interpretations that will have to be made. This work provides an overview of what we know about how the brain works regarding visual space, giving an insight into one of our most vital yet least understood senses.

As recognized, adventure as well as experience not quite lesson, amusement, as with ease as arrangement can be gotten by just checking out a book **Visual Space** afterward it is not directly done, you could admit even more around this life, almost the world.

We find the money for you this proper as capably as simple exaggeration to get those all. We find the money for Visual Space

and numerous book collections from fictions to scientific research in any way. accompanied by them is this Visual Space that can be your partner.
